

The major factor in undesirable performance at any level of the equine industry is STRESS.

TwoBulls De~STRESS PLUS was developed to control STRESS at all levels in a safe, all natural calming formula that will improve handling, breeding, and competition performance.

What causes STRESS ????

- Fear
- Confinement
- New Surroundings
- Hauling
- Handling
- Treatment
- Noise/Lights/People

Why use De~STRESS PLUS:

Using De~STRESS PLUS correctly will allow handling and activity with Equine in a manner that decreases injury due to stress related anxiety. A stress free equine is less likely to be injured or cause injury and perform better from the training pen to the competition arena.

TwoBulls® De~STRESS PLUS+

For Stress Prone Equine

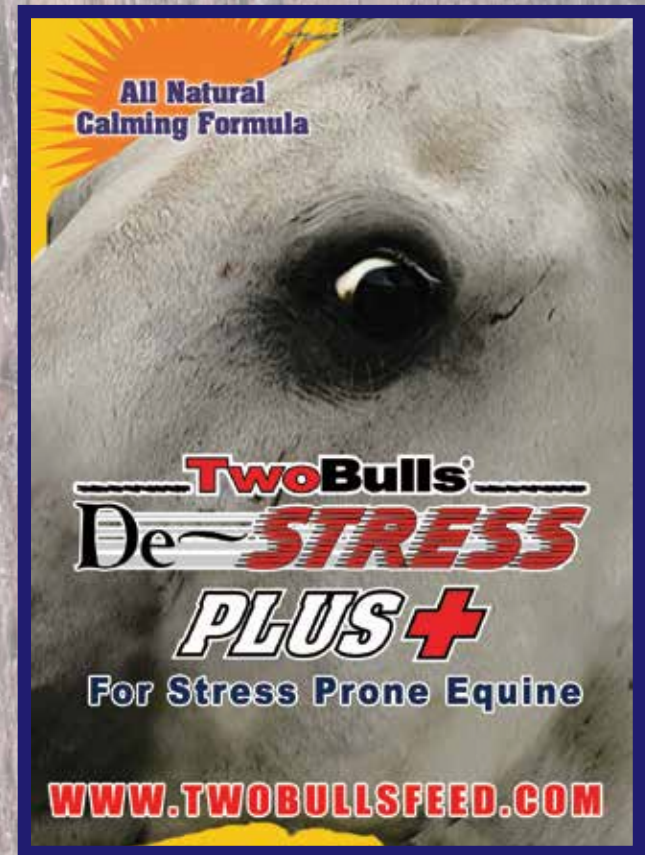

De-Stress Plus is a great product for taking the nervous edge off horses while still maintaining full performance ability. It is also effective in making difficult animals better to handle, and is easy to administer and highly palatable. I have used De-Stress on my own horses and have recommended it to many customers with great results.

Carl Martin, DVM

My 1D barrelhorse would get worked up at the gate causing him to use vital energy before our run, not to mention it sometimes took a village to get us in. After putting him on De-Stress Plus, he can focus now and the drama into the arena isn't as intense. He saves his physical and mental energy for our run and he cools down nicely. Taking that edge off without messing with his desire to run allows us to work better as a team not to mention it improves our safety.

- Cost Effective

TwoBulls® De~STRESS

PLUS+

How to use De~STRESS Plus:

- Simply mix with minimum amount of feed or drench in mouth 1 - 4 hours prior to any activity that is likely to cause stress (training, competition, shoeing, vet or dental procedure etc.).
- Dosage – 20 cc/ml
- For critical cases dosage can safely be increased to desired effectiveness.
- Each animal is unique and dosage can differ based on stress level.
- Takes effect quickly (1-2 hours) and last up to 12 hours depending on animal and stress level.
- For competition allow a minimum of 2 hours before competing after dosage.

Cost effective stress control for stress prone Equine

Avg. cost per dose is less than \$3.50 and last up to 12 hours.
